

## Appendix 1: Telescope Limiting-Magnitude and Resolution

Listed below are limiting-magnitudes and resolution values for a variety of common-sized (**SIZE** in inches) backyard telescopes in use today, ranging from 2- to 14-in. in aperture. (The 2.4-in. entry is the ubiquitous 60 mm refractor, of which there are perhaps more than any other telescope in the world!) Values for the minimum visual magnitude (**MAG.**) listed here are for single stars and are only very approximate, since experienced keen-eyed observers may see as much as a full magnitude fainter under excellent sky conditions. Companions to visual double stars—especially those in close proximity to a bright primary—are typically much more difficult to see than is a star of the same magnitude placed alone in the eyepiece field. Among the many variables involved are light pollution, sky conditions, optical quality, mirror and lens coatings, eyepiece design, obstructed or unobstructed optical system, color (spectral type) of the star, and even the age of the observer. Only a few representative limiting magnitudes are given here (in increments of increasing aperture), as an indication of what an observer might typically expect to see in various sized telescopes. Three different values in arc-seconds are listed for resolution, which are for two stars of equal brightness and of about the sixth magnitude. These figures differ significantly for brighter, fainter and, especially, unequal pairs. **DAWES** is the value based on Dawes' Limit ( $R=4.56/A$ ), **RAYLEIGH** on the Rayleigh Criterion ( $R=5.5/D$ ), and **MARKOWITZ** on Markowitz's Limit ( $R=6.0/D$ ). Note that in these equations "A" (for aperture) and "D" (for diameter) are the same thing. The numerical constants are arc-seconds.

SIZE	MAG.	DAWES	RAYLEIGH	MARKOWITZ
2.0	10.3	2.28	2.75	3.00
2.4		1.90	2.29	2.50
3.0	11.2	1.52	1.83	2.00
3.5		1.30	1.57	1.71
4.0	11.8	1.14	1.38	1.50
4.5		1.01	1.22	1.33
5.0		0.91	1.10	1.20
6.0	12.7	0.76	0.92	1.00
7.0		0.65	0.79	0.86
8.0	13.3	0.57	0.69	0.75
10.0	13.8	0.46	0.55	0.60
11.0		0.42	0.50	0.55
12.0		0.38	0.46	0.50
12.5	14.3	0.36	0.44	0.48
13.0		0.35	0.42	0.46
14.0	14.5	0.33	0.39	0.43

## **Appendix 2: Constellation Table**

The following list gives the standard International Astronomical Union (IAU) three-letter abbreviations for the 88 officially-recognized constellations, together with both their full names and genitive (possessive) cases, and order of size in terms of number of square degrees of sky.

ABBREV.	NAME	GENITIVE	SIZE
AND	Andromeda	Andromedae	19
ANT	Antlia	Antliae	62
APS	Apus	Apodis	67
AQR	Aquarius	Aquarii	10
AQL	Aquila	Aquilae	22
ARA	Ara	Arae	63
ARI	Aries	Arietis	39
AUR	Auriga	Aurigae	21
BOO	Bootes	Bootis	13
CAE	Caelum	Caeli	81
CAM	Camelopardalis	Camelopardalis	18
CNC	Cancer	Cancri	31
CVN	Canes Venatici	Canum Venaticorum	38
CMA	Canis Major	Canis Majoris	43
CMI	Canis Minor	Canis Minoris	71
CAP	Capricornus	Capricorni	40
CAR	Carina	Carinae	34
CAS	Cassiopeia	Cassiopeiae	25

VIR	Virgo	Virginis	2
VOL	Volans	Volantis	76
VUL	Vulpecula	Vulpeculae	55

## Appendix 3: Celestial Showpiece Roster

Below are 300 of the finest deep-sky treasures for viewing and exploration with telescopes from 2- to 14-in. in aperture. Nearly all of them can be seen in the smallest of glasses, and many even in binoculars. Arranged in alphabetical order by constellation (which makes it more convenient to pick out objects for a given night's observations than one ordered by coordinates), it features brief descriptions of each entry. Primary data sources were *Sky Catalogue 2000.0* and the *Washington Double Star Catalog*. Constellation (**CON**) abbreviations are the official three-letter designations adopted by the International Astronomical Union (see the constellation listing in Appendix 2). Right Ascension (**RA**) in hours and minutes, and Declination (**DEC**) in degrees and minutes, are given for the current standard Epoch 2000.0. Other headings are the class or type of object (**TYPE**)\*, apparent visual magnitude/s (**MAG/S**) and angular size or separation (**SIZE/SEP**) in arc-seconds. (Position angles for double stars are not given due to the confusion resulting from the common use of star diagonals with refracting and compound telescopes, producing mirror-reversed images of the sky. Observers desiring the latest values of these as well as component separations should consult the U.S. Naval Observatory's *Washington Double Star Catalog* on-line at <http://ad.usno.navy.mil/wds/>.) Approximate distance in light-years (LY) is also given in many cases. Double and multiple stars dominate this roster due to their great profusion in the sky and also their easy visibility on all but the worst of nights. This list extends down to  $-45^{\circ}$  Declination, covering that 3/4ths of the entire heavens visible from mid-northern latitudes. (Two "must see" showpieces actually lie slightly below this limit.) \*Key: SS=First-magnitude/highly-tinted and/or variable single star, DS=Double or multiple star, AS=Association or asterism, OC=Open cluster, GC=Globular cluster, DN=Diffuse Nebula, PN=Planetary Nebula, SR=Supernova remnant, GX=Galaxy, MW=Milky way. Roster based on the author's book *Celestial Harvest: 300-Plus Showpieces of the Heavens for Telescope Viewing & Contemplation* (Dover).

OBJECT/CON	RA	DEC	TYPE	MAG/S	SIZE/SEP	REMARKS
$\gamma$ AND	02 04	+42 20	DS	2.3, 5.5	10"	Almach. Brilliant topaz-orange and aquamarine double—superb contrast! B is close blue and green, 61-year binary for 8" and larger scopes. 300LY
59 AND	02 11	+39 02	DS	6.1, 6.8	17"	Neatly matched, easy bluish-white pair
56 AND	01 56	+37 15	DS	5.7, 5.9	190"	Wide golden pair parked on SW edge of cluster NGC 752. 360LY
NGC 752 AND	01 58	+37 50	OC	5.7	50'	Large, sprawling clan of over 60 stars. 1,200LY
M31/M32/M110 AND	00 43	+41 16	GX	3.5/8.2/8.0	178'x63''/8'x6''/17'x10'	Andromeda Galaxy and companions—magnificent! Nucleus, disk, dust lanes, spiral arms all visible. Binocular wonder! 2,400,000LY
NGC 7662 AND	23 26	+42 33	PN	8.5	32" x 28"	Blue Snowball. Small but striking soft-blue cosmic egg. 5,600LY
NGC 891 AND	02 23	+42 42	GX	10.0	11'x2'	Often-pictured but dim edge-on galaxy with dust lane. 13,000,000LY
U ANT	10 35	-39 34	SS	5.4-6.8	—	Striking red “carbon” star—seldom observed due to low altitude
$\zeta$ AQR	22 29	-00 01	DS	4.4, 4.5	2"	Matched, bright, off-white close pair. Famous 850-year binary. 76LY
94 AQR	23 19	-13 28	DS	5.3, 7.3	13"	Lovely pale rose or reddish and light emerald green double
M2 AQR	21 34	-00 49	GC	6.5	13'	Stellar beehive—a starburst in larger scopes. 37,000LY
NGC 7009 AQR	21 04	-11 22	PN	8.3	25" x 17"	Saturn Nebula. Striking bright, bluish-green ellipsoid. 3,000LY

15 AQL	19 05	-04 02	DS	5.5, 7.2	38"	Easy, wide duo. Yellowish-orange and ruddy-purple or lilac
57 AQL	19 55	-08 14	DS	5.8, 6.5	36"	Another roomy pair. Both stars bluish-white—hint of other hues
V AQL	19 04	-05 41	SS	6.6-8.4	—	A lovely glowing red ember!
$\gamma$ ARI	01 54	+19 18	DS	4.8, 4.8	8"	Mesarthim. Stunning, perfectly-matched blue-white pair! 200LY
$\lambda$ ARI	01 58	+23 36	DS	4.9, 7.7	37"	Wide color/magnitude-contrast double. 105LY
$\alpha$ AUR	05 17	+46 00	SS	0.08	—	Capella. A radiant golden-yellow sun! 42LY
$\theta$ AUR	06 00	+37 13	DS	2.6, 7.1	4"	Tight mag.-contrast pair for steady nights.
14 AUR	05 15	+32 41	DS	5.1, 7.4-7.9	15"	Lilac and yellow. 110LY
UU AUR	06 36	+38 27	SS	5.3-6.5	—	Neat double with variable companion
M36 AUR	05 36	+34 08	OC	6.0	12'	Beautiful red color—a celestial stoplight!
M37 AUR	05 52	+32 33	OC	5.6	24'	Lovely cluster of 60-some stars. 4,000LY
M38 AUR	05 29	+35 50	OC	6.4	21'	Very rich and uniform stellar jewelbox—superb! Best in AUR. 4,500LY
$\alpha$ BOO	14 16	+19 11	SS	-0.04	—	A hundred suns arranged in an oblique-cross formation. 4,000LY
$\varepsilon$ BOO	14 45	+27 04	DS	2.5, 4.9	3"	Arcturus. A splendid yellowish-orange stellar gem! 37LY
$\xi$ BOO	14 51	+19 06	DS	4.7, 7.0	6"	Izar. Bright, tight double—superb pale-orange and sea-green! Struve's 'Pulcherrima' (the most beautiful one). Needs good seeing. 160LY
$\mu$ BOO	15 24	+37 23	DS	4.3, 7.0, 7.6	108", 2"	Striking—yellow and reddish-orange or purple. 150-year binary. 22LY
$\kappa$ BOO	14 14	+51 47	DS	4.6, 6.6	13"	Neat triple system! B-C is 260-year binary. Yellow, two oranges. 95LY
						Pretty double—tints real but elusive

(continued)

(continued)

OBJECT/CON	RA	DEC	TYPE	MAG/S	SIZE/SEP	REMARKS
$\pi$ BOO	14 41	+16 25	DS	4.9, 5.8	6"	Closer version of $\kappa$ BOO
$\zeta$ BOO	14 41	+13 44	DS	4.5, 4.6	0.7"	Matched white, ultra-close 125-year binary.
Struve 1835 BOO	14 23	+08 27	DS	5.1, 7.4	6"	Stellar egg in small glass
32 CAM	12 49	+83 25	DS	5.3, 5.8	22"	Sweet pair—white and bluish or lilac
U CAM	03 42	+62 39	SS	8.1–8.6	—	Nice matched off-white pair. Little-known—a pity! 495LY
ST CAM	04 51	+68 10	SS	7.0–8.4	—	One of the reddest stars in the sky
NGC 2,403 CAM	07 37	+65 36	GX	8.4	18'x11'	Another ruddy stellar gem
$\zeta$ CNC	08 12	+17 39	DS	5.6, 6.0, 6.2	0.9", 6"	One of the brightest galaxies and finest spirals in sky. 12,000,000LY
i-1 CNC	08 47	+28 46	DS	4.2, 6.6	30"	Close, matched trio with 60- and 1,150-year periods. All yellow. 70LY
X CNC	08 55	+17 14	SS	5.7.5	—	Albireo of Spring. Superb orange and blue pair! 165LY
M44 CNC	08 40	+19 59	OC	3.1	90'	A stellar ruby! Tint obvious even in small glass
M67 CNC	08 50	+11 49	OC	6.9	30'	Beehive cluster. A sprawling commune of over 50 suns. Best seen in binoculars and wide-field telescopes. 590LY
$\alpha$ CVN	12 56	+38 19	DS	2.9, 5.5	20"	Lovely but overlooked cluster in shadow of Beehive. 2,500LY
Y CVN	12 45	+45 26	SS	5.5–6.0	—	Cor Caroli. Magnificent blue-white double—one of the finest! 130LY
M3 CVN	13 42	+28 23	GC	6.4	16'	La Superba. A fiery reddish-orange interstellar beacon. 400LY
						Spring's Globular. First bright GC of season—radiant ball! 35,000LY

M51 CVN	13 30	+47 12	GX	8.4	11'×8'	Rosse's Whirlpool Galaxy. Big, beautiful face-on spiral. 31,000,000LY
M63 CVN	13 16	+42 02	GX	8.6	12'×8'	Sunflower Galaxy. Like some vast celestial flower. 35,000,000LY
M94 CVN	12 51	+41 07	GX	8.2	11'×9'	Small, bright tightly-wound spiral. 22,000,000LY
M106 CVN	12 19	+47 18	GX	8.3	18'×8'	Big, bright and bold spiral for small glasses. 33,000,000LY
NGC 4631 CVN	12 42	+32 32	GX	9.3	15'×3'	Humpback Whale Galaxy. Large edge-on spiral. 39,000,000LY
$\alpha$ CMA	06 45	-16 43	DS	-1.46, 8.5	7"	Sirius. Blazing blue-white sapphire with famed white-dwarf companion! A 50-year binary, now widening. Just 9LY away!
$\varepsilon$ CMA	06 59	-28 58	DS	1.5, 7.5	7"	Adhara. A miniature Sirius—and much easier! 490LY
h3945 CMA	07 17	-23 19	DS	4.8, 6.8	27"	Albireo of Winter. Splendid reddish-orange and greenish-blue pair!
W CMA	07 08	-11 55	SS	6.4-7.9	—	Red ember in nice contrast with surrounding blue-white field stars
M41 CMA	06 46	-20 45	OC	4.5	38'	Lovely big, bright sparkling clan of 80 suns below Sirius! 2,400LY
$\tau$ CMA/NGC 2362	07 19	-24 57	OC	4.1	8'	Tau Canis Majoris Cluster. Small glittering jewelbox of 60 diamonds surrounding a bright central star. 5,400LY
$\alpha$ -2/1 CAP	20 18	-12 33	DS	3.6, 4.2	380"	Algiedi. Naked-eye/binocular orange pair with faint comps. at 7" and 46" forming weak double-double. Stars unrelated: 110LY and 700LY!

(continued)

(continued)

OBJECT/CON	RA	DEC	TYPE	MAG/S	SIZE/SEP	REMARKS
$\beta$ CAP	20 21	-14 47	DS	3.4, 6.2	205"	Wide binocular combo—yellowish-orange and sky-blue. 560LY
$\circ$ CAP	20 30	-18 35	DS	6.1, 6.6	22"	Neat, closely matched blue-white pair for small scopes
RT CAP	20 17	-21 19	SS	6.5-8.1	—	Lovely warm-hued gem
M30 CAP	21 40	-23 11	GC	7.5	11'	Pale-white starry globe nicely contrasted with 8th-mag. star. 40,000LY
$\eta$ CAS	00 49	+57 49	DS	3.4, 7.5	13"	Easter Egg Double. Beautiful yellow and ruddy-purple or garnet color and magnitude-contrast combo. A 480-year binary. Nearby—just 19LY
$^1$ CAS	02 29	+67 24	DS	4.6, 6.9, 8.4	2.5", 7"	Elegant but tight triple system. Hues yellow, lilac and blue. 160LY
$\sigma$ CAS	23 59	+55 45	DS	5.0, 7.1	3"	Tight pair with intense bluish and greenish tints. Quite distant—1,400LY
Struve 163 CAS	01 51	+64 51	DS	6.8, 8.8	35"	Colorful, unequal faintish pair—reddy-orange and blue
Struve 3053 CAS	00 03	+66 06	DS	5.9, 7.3	15"	Beautiful miniature of Albireo in CYG.
M52 CAS	23 24	+61 35	OC	6.9	13'	Yellowish-orange and blue
M103 CAS	01 33	+60 42	OC	7.4	6'	Rich, triangular-shaped sparkling group of at least 100 stars. 4,000LY
$\varphi$ CAS/NGC 457	01 19	+58 20	OC	6.4	13'	A small fan-shaped clan of several dozen suns. 8,000LY
						Owl/ET Cluster. Distinctive splash of 80 suns and two “eyes”! 9,300LY

NGC 7789 CAS	23 57	+56 44	OC	6.7	16'	Caroline Herschel's Cluster. Rich uniform assemblage of more than 300 faint stars against stardust. Wondrous sight on dark night! 6,000LY
ω CEN	13 27	-47 29	GC	3.6	36'	Omega Centauri Cluster. Colossal stellar beehive containing more than a million suns—an amazing spectacle in any size scope! 17,000LY
NGC 5128 CEN	13 26	-43 01	GX	7.0	18'×14'	Black Belt Galaxy. Large globe split by dark dust lane. 22,500,000LY
β CEP	21 29	+70 34	DS	3.2, 7.9	13"	Neat unequal pair—greenish-white and blue or purple. Exquisite! 980LY
δ CEP	22 29	+58 25	DS	3.5–4.4, 6.3	41"	Striking pale orange and blue gems. Primary prototype of famed Cepheid variables—period 5.4 days. 1,000LY
ξ CEP	22 04	+64 38	DS	4.4, 6.5	8"	Neat bright pair with subtle colors—bluish and yellowish. 80LY
μ CEP	21 44	+58 47	SS	3.4–5.1	—	Herschel's Garnet Star. Reddest naked-eye star in N. sky. 2,800LY
Struve 2816 CEP	21 39	+57 29	DS	5.6, 7.7, 7.8	12", 20"	Striking triple system with double Struve 2819 (7.5, 8.5, 12") in field!
Struve 2840 CEP	21 52	+55 48	DS	5.5, 7.3	18"	Lovely pair—greenish-white and bluish-white
NGC 40 CEP	00 13	+72 32	PN	10.2	60"×40"	Dull reddish-grey disk with central star. 3,000LY
NGC 7023 CEP	21 02	+68 12	DN	6.8	18'	Iris Nebula. Bright reflection nebula surrounding 7th-mag. blue star
NGC 6939/6946 CEP	20 31	+60 38	OC/GX	7.8, 8.9	8/11'×10'	Unique cluster-galaxy combo set 38¢ apart! 4,000LY and 10,000,000LY
γ CET	02 43	-03 14	DS	3.5, 6.2	3"	Close, bright pair with delicate tints—yellow and ashen. 63LY

(continued)

(continued)

OBJECT/CON	RA	DEC	TYPE	MAG/S	SIZE/SEP	REMARKS
M77 CET	02 43	-00 01	GX	8.8	7'x6'	Intense star-like core surrounded by circular haze. .82,000,000LY
24 COM	12 35	+18 23	DS	5.2, 6.7	20"	Vivid orange and blue-green duo—a lovely jewel! 300LY
M53 COM	13 13	+18 10	GC	7.7	13'	A dim ball of minute stars. Needs aperture to really enjoy. 65,000LY
M64 COM	12 57	+21 41	GX	8.5	9'x5'	Blackeye Galaxy. Superb bright spiral with dark “eye.” “Like a colossal pendant abalone pearl in rayless void!” 25,000,000LY
M88 COM	12 32	+14 25	GX	9.5	7'x4'	Like a miniature Andromeda Galaxy. Stellar nucleus. 40,000,000LY
M99 COM	12 19	+14 25	GX	9.8	5'x5'	Pinwheel Nebula. Wonderful face-on spiral. 50,000,000LY
NGC 4565 COM	12 36	+25 59	GX	9.6	16'x3'	Ghostly edge-on spiral with dark equatorial dust lane. 20,000,000LY
MEL 111 COM	12 25	+26 00	OC	1.8	275'	Coma Star Cluster. Large hazy, naked-eye and binocular wonder. 270LY
$\gamma$ CRA	19 06	-37 04	DS	4.8, 5.1	1.3"	Twin yellowish binary—stars appear in contact. 69LY
$\zeta$ CRB	15 39	+36 38	DS	5.1, 6.0	6"	Pretty pair of bluish-white and greenish-white suns
$\sigma$ CRB	16 15	+33 52	DS	5.6, 6.6	7"	Like $\zeta$ but stars are yellowish. Binary with 1,000-year period
$\delta$ CRV	12 30	-16 31	DS	3.0, 8.4	24"	Algorab. Nice color and mag. contrast—yellow and violet or lilac. 12.5LY
Struve 1669 CRV	12 41	-13 01	DS	6.0, 6.1	5"	Neatly-matched close pair of yellowish-white suns

NGC 4361 CRV	12 24	-18 48	PN	10.3	80"	Large, round dimly glowing nebulous disk. 2,600LY
NGC 4038/4039 CRV	12 02	-18 52	GX	10.7	3'x2'	Antennae/Ring-Tail Galaxy. Colliding pair of galaxies! 90,000,000LY
$\alpha$ CYG	20 41	+45 17	SS	1.25	-	Deneb. Colossal blue supergiant 60,000×Sun's brightness! 1,600LY
$\beta$ CYG	19 31	+27 58	DS	3.1, 5.1	34"	Albireo. One of grandest sights in the heavens! Magnificent topaz and sapphire-blue pair in radiant MW setting. Finest double star. 380LY
$\sigma$ -1 CYG	20 14	+46 44	DS	3.8, 7.7, 4.8	107", 338"	Lovely wide trio—orange, blue and white in rich MW setting. 200LY
$\delta$ CYG	19 45	+45 08	DS	2.9, 6.3	2.5"	Bright, close unequal pair—tough but pretty. Greenish-white and ashen. Best seen in larger apertures. An 800-year-period binary. 270LY
16 CYG	19 42	+50 32	DS	6.0, 6.1	39"	Lovely matched golden duo in wide field with Blinking Planetary
61 CYG	21 07	+38 45	DS	5.2, 6.0	30"	Beautiful easy orange pair. Famous as first star to have its distance (parallax) directly measured—11LYs. Slow 650-year binary
V460 CYG	21 42	+35 31	SS	5.6-7.0	-	Striking red gem—an unresolved binary harboring a black hole!
M39 CYG	21 32	+48 26	OC	4.6	32'	Large triangular-shaped splash of 30 stars—best in binoculars. 890LY
NGC 6826 CYG	19 45	+50 31	PN	8.9	27"	Blinking Planetary. Pale blue disk with obvious 10th-mag. central star. Alternating between direct and averted vision makes it blink! 3,300LY

65 PSC	00 50	+27 43	DS	6.3, 6.3	4"	Neatly matched, pale-yellow cozy pair
TX=19 PSC	23 46	+03 29	SS	4.5-5.3	—	Lovely reddish-orange sun in Circlet Asterism of PSC. 400LY
$\alpha$ PSA	22 58	-29 37	SS	1.2	—	Fomalhaut. The “Solitary One.” A sparkling blue-white gem. 25LY
k PUP	07 39	-26 48	DS	4.5, 4.7	10"	Superb bright pair resembling $\gamma$ ARI. Both blue-white. 450LY
M46/NGC 2438 PUP	07 42	-14 49	OC/PN	6.1/11.5	27/66"	Rich uniform clan of over 100 suns with a tiny, ghostly ring-shaped nebula projected against it. Unrelated—5,400LY and 3,000LY
M47 PUP	07 37	-14 30	OC	4.4	30'	Grand broad splash of several dozen suns. 1,500LY
M93 PUP	07 45	-23 52	OC	6.2	22'	Glorious swarm of some 80 colorful stars. Wedged-shaped. 3,400LY
NGC 2440 PUP	07 42	-18 13	PN	10.5	16"	Tiny, bluish-white disk—a celestial opal. 3,500LY
NGC 2477 PUP	07 52	-38 33	OC	5.8	27'	Superb, rich cluster of 300 stars—like a loose globular. 4,000LY

M71 SGE	19 54	+18 47	GC	8.3	7'	Remote-looking but pretty, misty glow in rich MW field. 13,000LY
AQ SGR	19 34	-16 22	SS	6.7-7.1	—	Glowing reddish stellar ember
M8/NGC 6530 SGR	18 04	-24 23	DN/OC	5.8/4.6	90'×40'/15'	Lagoon Nebula. Large floating nebulous patch crossed by great curving dark lane, with scattered cluster to one side. Wondrous sight! Finest of its class for N. observers after the Orion Nebula. 5,000LY
M17 SGR	18 21	-16 11	DN	6.0	46'×37'	Horseshoe/Omega/Swan Nebula. Multi-named glowing wonder. A long ray with hook at one end, crossed by dark lanes and many stars. 5,000LY
M20 SGR	18 03	-23 02	DN	6.3	29'×27'	Trifid Nebula. Although inferior to the Lagoon (which lies closeby), a dark-night revelation! Bulbous cloud trisectioned with dark rifts. 5,500LY
M21 SGR	18 05	-22 30	OC	5.9	13'	Bright stellar clan of some 60 suns lying near the Trifid. 4,000LY
M22 SGR	18 36	-23 54	GC	5.1	24'	M13 Rival. Big, bright magnificent stellar beehive, resolved to center even in small scopes! Stars look ruddy in larger glasses.
M23 SGR	17 57	-19 01	OC	5.5	27'	Big, rich and uniform stellar commune. Lovely sight. 2,100LY
M24 SGR	18 18	-18 25	GX	4.5	120'×60'	Small Sagittarius Star Cloud. Magnificent MW starcloud for sweeping with binoculars and wide-field telescopes. Overpowering! 16,000LY

(continued)

(continued)

OBJECT/CON	RA	DEC	TYPE	MAG/S	SIZE/SEP	REMARKS
M25 SGR	18 32	-19 15	OC	4.6	32'	Large splashy cluster of some 50 suns. Coarse but brilliant. Contains Cepheid U SGR, which varies from 6.3 to 7.1 over 7 days.
M55 SGR	19 40	-30 58	GC	7.0	19'	Large, loosely compressed orb. Needs dark, steady night. 16,000LY
NGC 6818 SGR	19 44	-14 09	PN	9.9	22"x15"	Little Gem Nebula. Small, bluish-green cosmic egg. 5,000LY
$\alpha$ SCO	16 29	-26 26	DS	0.9-1.8, 5.4	2.5"	Antares. Beautiful fiery-red supergiant with superb emerald-green companion! Very tight—good seeing a must. 900-year binary. 600LY
$\beta$ SCO	16 05	-19 48	DS	2.6, 4.9	14"	Graffias. Lovely blue-white pair resembling Mizar in UMA. 600LY
$\nu$ SCO	16 12	-19 28	DS	4.5, 5.3, 6.6, 7.2	1", 2"	Colorful but tight quadruple with pairs 41" apart. Tints subtle but real—striking sight in larger scopes. 440LY
$\xi$ SCO	16 04	-11 22	DS	4.8, 7.3	8"	Yellow pair with Struve 1999 (7.4, 8.1, 12") 280" away forming wide double-double.
M4 SCO	16 24	-26 32	GC	5.9	26'	Primary 46-year period close binary. 80LY Big softly-shining globular swarm, resolvable in the smallest of scopes. Noticeably elongated vertically. Lovely sight! Near Antares. 7,000LY
M6 SCO	17 40	-32 13	OC	4.2	25'	Butterfly Cluster. Like a butterfly with open wings! 1,400LY
M7 SCO	17 54	-34 39	OC	3.3	80'	Sprawling, radiant swarm of 80 tinted jewels. Binocular target. 800LY

M80 SCO	16 17	-22 59	GC	7.2	9'	Herschel's Delight. Tiny, densely-packed glittering starball. 27,000LY
NGC 6231 SCO	16 54	-41 48	OC	2.6	15'	Glorious, dazzling cluster—120 suns plus blue supergiant! 6,000LY
NGC 6302 SCO	17 14	-37 06	PN	9.7	2'×1'	Bug Nebula. Strange, unusual-looking bi-polar nebula. 1,900LY
R SCL	01 27	-32 33	SS	5.9-8.8	—	Pulsating crimson jewel—one of reddest stars in the sky
NGC 55 SCL	00 15	-39 11	GX	7.9	32'×6'	Huge, mottled edge-on star-city over 1½° long. 7,000,000LY
NGC 253 SCL	00 48	-25 17	GX	7.1	25'×7'	Sculptor Galaxy. Big, bright and beautiful!
						Cigar-shaped—like a smaller Andromeda Galaxy—a wondrous sight! 7,500,000LY
M11 SCT	18 51	-06 16	OC	5.8	14'	Smyth's Wild Duck Cluster. A rich, glittering fan-shaped swarm of some 500 suns with an 8th-mag. star near apex—a beauty! 5,500LY
Milky Way SCT	18 40	-06 00	GX	—	720'×540'	Scutum Star Cloud/Gem of the Milky Way.
						"Downtown Milky Way!" An amazing binocular and RFT starry wonderland!
δ SER	15 35	+10 32	DS	4.2, 5.2	4"	Sense 3-D "depth"!!
θ SER	18 56	+04 12	DS	4.5, 5.4	22"	Striking, neatly-paired double with off-white hues—elegant! 85LY
M5 SER	15 19	+02 05	GC	5.8	17'	Wider version of δ SER. Pretty, easy pair for any glass. 140LY
						M13 Rival. Magnificent ball of stars—a starry blizzard! 25,000LY

(continued)

(continued)

OBJECT/CON	RA	DEC	TYPE	MAG/S	SIZE/SEP	REMARKS
M16/IC 4703 SER	18 19	-13 47	OC/DN	6.0/-	25'53"×28'	Eagle/Star Queen Nebula and Cluster. A faintly fog-bound nebulous star cluster. Site of famous Hubble Space Telescope image.
IC 4756 SER	18 39	+05 27	OC	4.5	70'	Big, bright scattered group of some 80 stars—binocular clan. 1,400LY
NGC 3115 SEX	10 05	-07 43	GX	9.2	8'×3'	Spindle Galaxy. Elongated glow with bright center—typical elliptical galaxy shape but with pointy ends.
118 TAU	05 29	+25 09	DS	5.8, 6.6	5"	Nicely-paired combo—blue-white and bluish-Pretty
α TAU	04 36	+16 31	SS	0.8–1.0	—	Aldebaran. Lovely topaz gem projected against Hyades Cluster. 65LY
θ-1/2 TAU	04 29	+15 52	DS	3.4, 3.8	337"	Wide naked-eye/binocular pair in Hyades Cluster. White and yellow
MEL 25 TAU	04 29	+15 52	OC	0.5	330'	Hyades Cluster. Huge bright, striking V-shaped stellar clan abounding in star-pairs and colorful suns. A naked-eye and binocular wonder! 150LY
M1 TAU	05 34	+22 01	SR	8.4	6'×4'	Rosse's Crab Nebula. Celebrated remnant of the 1054 AD supernova outburst with rapidly spinning neutron star/pulsar at core. An irregular pale elliptical glow with ragged edges. Neat close double Struve 742 (7.2, 7.8, 4") lies unsuspected in field.

M45 TAU	03 47	+24 07	OC	1.2	110'	Pleiades Star Cluster. Brightest, best-known and finest OC in the entire heavens! A brilliant starry commune of blue-white diamonds! Naked-eye, binocular and telescopic wonder. A thrilling spectacle!
NGC 1514 TAU	04 09	+30 47	PN	10.9	2'	410LY
<sup>1</sup> TRI	02 12	+30 18	DS	5.3, 6.9	4"	A 9th-mag. star-nucleus surrounded by a faint circular nebulosity. "A most singular phenomenon!" exclaimed Sir William Herschel
M33 TRI	01 34	+30 39	GX	5.7	62'×39'	Little-known, close but lovely gold and blue-green pair. 200LY
$\zeta$ /80 UMA	13 24	+54 56	DS	2.3, 4.0, 4.0	14", 709"	Pinwheel/Triangulum Galaxy. Big pale, face-on spiral with delicate arms and patches of nebulosity. A dark-night revelation! 3,600,000LY
$\xi$ UMA	11 18	+31 32	DS	4.3, 4.8	1.8"	Famed Mizar with Alcor nearby. Trio of radiant blue-white diamonds! All three suns are spectroscopic binaries (like many other stars on list) and thus one vast sextuple system. First double star discovered. 78LY
VY UMA	10 45	+67 25	SS	5.9–6.5	—	Historic 60-year binary (first to have orbit determined) which has made three circuits since discovery! Twin yellowish suns in contact. 26LY
						Ruddy-orange beacon above the Big Dipper—visible year round

OBJECT/CON	RA	DEC	TYPE	MAG/S	SIZE/SEP	REMARKS
M81/M82 UMA	09 56	+69 04	GX	6.9/8.4	26'×14' 11'×5'	Bode's Nebulae. Finest galaxy pair in sky! M81 is a bright oblong spiral with vivid nucleus; M82 is a long, narrow curved ray crossed by dark rifts. Splendid sight—both floating serenely $\frac{1}{2}^{\circ}$ apart. 7,000,000LY
M97 UMA	11 15	+55 01	PN	11.2	180"	Rosse's Owl Nebula. Large pale nebula with two subtle dark areas or “eyes” making it faintly bi-central. The cigar-shaped 10th-mag. spiral M108 is in the same wide field $48' \text{ NW}$ —a true celestial “odd couple”! The Owl lies 10,000LY away but the galaxy thousands of times as far
M101 UMA	14 03	+54 21	GX	7.7	27'×26'	Pinwheel Galaxy. Large, pale circular glow—a vast face-on spiral displaying much subtle detail on dark nights. 15,000,000LY
$\alpha$ UMI	02 32	+89 16	DS	1.9–2.1, 9.0	18"	Polaris. Mag.-contrast pair having amazing (apparent) “24-h orbital period” caused by Earth’s rotation! Brightest Cepheid in sky. 430LY
$\gamma$ VEL	08 10	-47 20	DS	1.8, 4.3	41"	Dazzling bluish pair—one of most beautiful in the heavens! 1,000LY
NGC 3132 VEL	10 08	-40 26	PN	8.2	84"×52"	Eight-Burst Planetary. One of brightest in sky—white ellipse with 9th-magnitude central sun and hints of multiple rings! 2,000LY
$\alpha$ VIR	13 25	-11 10	SS	0.97	—	Spica. Icy-blue supersun more than 2,000 Sun’s luminosity. 250LY

$\gamma$ VIR	12 42	-01 27	DS	3.5, 3.5	0.5"	Porrima. Famed bright binary with 171-year period. Now opening up from it's 2005 minimum separation, these blended stars look like some yellowish cosmic egg with slowly-turning long axis! 1.39LY
SS VIR	12 25	+00 48	SS	6.0-9.6	-	Ruddy pulsating interstellar beacon—easily spied when at its brightest!
M84/M86/M87 VIR	12 25	+12 53	GX	9.3, 9.2, 8.6	5'x4'7" x 6'7"x7'	Coma-Virgo Galaxy Cluster. Three bright specimens (all giant elliptical galaxies) of the famed “Realm of the Nebulae.” Here, hundreds of star- cities can be seen in small scopes—often several in the same eyepiece field—and more than 10,000 have been photographed! 70,000,000LY
M49 VIR	12 30	+08 00	GX	8.4	9'x7'	Another bright elliptical positioned between two stars. 65,000,000LY
M59/M60 VIR	12 42	+11 39	GX	9.8/8.8	5'x3'7" x 6'	Nice elliptical galaxy pair lying in same field 25' apart.
M61 VIR	12 22	+04 28	GX	9.7	6'x6'	One of the many spirals in the C-V Cluster—face-on with two arms
M104 VIR	12 40	-11 37	GX	8.3	9'x4'	Sombrero Galaxy. One of brightest and most spectacular edge-on spirals in the sky! Bulbous glow with dark equatorial band.
NGC 4762 VIR	12 53	+11 14	GX	10.2	9'x2'	28,000,000LY The Kite. Thin edge-on like paper kite—dim galaxy NGC 4754 nearby.
3C273 VIR	12 29	+02 03	GX	12.8	-	First Quasar. Also brightest and closest—visible in 4- to 6-in. glass as a dim bluish star despite its vast distance of 1,900,000,000LY!
