

# Index

## B

Building damage categories, 87, 88  
Building typology, 125, 144, 232

## C

Capacity curve, 11–14, 16–18, 34, 36, 40, 113, 213  
Capacity/demand ratio, 5, 7, 13  
Collapse risk, 6  
Communication, 158, 288, 292, 293  
Crushing, 88, 90, 91, 94, 104  
Cumulative distribution, 118, 125

## D

Damage limit, 87, 94, 95, 98, 99, 101, 116, 189  
Density, 122, 159, 260  
Derivation, 125, 179, 193, 219  
Direct and indirect costs, 65–67  
Drift ratio, 115, 193, 196, 203, 206, 215, 252

## E

Earthquake sequence, 169  
Empirical damage, 65, 70–72  
European risk model, 165

## F

Fire following earthquake process, 292

## G

Ground-motion modelling, 169, 170, 186

## H

HAZUS, 112, 125, 127, 130, 142, 200, 224–226  
Heavy damage, 68, 75, 105, 138, 139

## I

Insurance pricing, 112, 240  
Intensity distribution, 133, 292

## L

Life-cycle, 190, 219  
Life safety, 5–8, 10, 12, 14–16, 21, 49, 206  
Loss estimation, 13, 16, 19, 33, 127, 146, 147, 242, 248, 251, 256  
Loss exceedance curves, 128, 141, 255, 256, 264

## M

Moderate damage, 33, 127, 206, 208, 228

## P

Population assistance, 70, 75, 76  
Post-earthquake damage assessment, 85

## R

Reliability analysis, 195  
Repairability, 19, 65, 67  
Repair and strengthening, 65, 67–69, 77–79, 81, 82, 89  
Resilient, 278  
Risk map, 113, 130, 142

**S**

Seismic fragility, 116, 125, 189, 195, 210, 217, 219

Seismic risk analysis, 115, 122, 129

Seismic risk model, 113, 155, 158, 161, 164–166, 247

Site effect, 169, 177–180, 185, 187

Slight damage, 33, 127, 206

Spalling, 88, 90, 94, 210

Spectral acceleration, 118, 121, 136, 172, 186, 187, 194–197, 201, 218, 252, 254, 268

**T**

Transportation, 45, 71, 288, 289, 292, 294

**U**

USGS, 112, 124, 165

**W**

Water supply, 287–289, 292, 296, 301
