Scheduled to come out in December 1977

Vol. 25: **Microbial Ecology of a Brackish Water Environment**
Editor: G. Rheinheimer
Approx. 77 figs., 84 tables. Approx. 300
pages

This book describes the results of a 15-month investigation in the Kiel Bight (Baltic Sea) in which more than 50 hydrographical, chemical, and microbiological parameters were measured. Using methods such as, for example, scanning electron microscopy and autoradiography, a comparative analysis of most of the measured data on the bacterial colonization of detritus and the relations between pollution, production, and remineralization led to the energy fluxes. Together with Vol. 24 by Kremer and Nixon about the ecological studies at the Narragansett Bay and the system-simulation by a computer model, these two books represent a comprehensive study of coastal marine ecosystems.
