The series “Advances in Intelligent Systems and Computing” contains publications on theory, applications, and design methods of Intelligent Systems and Intelligent Computing. Virtually all disciplines such as engineering, natural sciences, computer and information science, ICT, economics, business, e-commerce, environment, healthcare, life science are covered. The list of topics spans all the areas of modern intelligent systems and computing such as: computational intelligence, soft computing including neural networks, fuzzy systems, evolutionary computing and the fusion of these paradigms, social intelligence, ambient intelligence, computational neuroscience, artificial life, virtual worlds and society, cognitive science and systems, Perception and Vision, DNA and immune based systems, self-organizing and adaptive systems, e-Learning and teaching, human-centered and human-centric computing, recommender systems, intelligent control, robotics and mechatronics including human-machine teaming, knowledge-based paradigms, learning paradigms, machine ethics, intelligent data analysis, knowledge management, intelligent agents, intelligent decision making and support, intelligent network security, trust management, interactive entertainment, Web intelligence and multimedia.

The publications within “Advances in Intelligent Systems and Computing” are primarily proceedings of important conferences, symposia and congresses. They cover significant recent developments in the field, both of a foundational and applicable character. An important characteristic feature of the series is the short publication time and world-wide distribution. This permits a rapid and broad dissemination of research results.

Indexed by DBLP, EI Compendex, INSPEC, WTI Frankfurt eG, zbMATH, Japanese Science and Technology Agency (JST), SCImago.

All books published in the series are submitted for consideration in Web of Science.

# Preface

This book is based on the selected papers accepted for presentation and discussion at the 2021 International Conference on Advances in Digital Science (ICADS 2021) that was held on February 19–21, 2021. This conference had the support of the Institute of Certified Specialists (ICS), Russia, and Springer.

The 2021 International Conference on Advances in Digital Science (ICADS 2021) is a network of scholars interested in natural and social sciences original research results. The network was established to promote cooperation between scholars of different countries. An important characteristic feature of the conference is the short publication time and worldwide distribution. This conference enables fast dissemination so the conference participants can publish their papers in print and electronic format, which is then made available worldwide and accessible by numerous researchers.

The Scientific Committee of ICADS 2021 was composed of a multidisciplinary group of 110 experts from 38 countries around the world. Fifty-one invited reviewers, united by science, have had the responsibility for papers' evaluating in a 'double-blind review' process. All the selected papers went through a round of strictly peer review process. The main topics of the included papers are the following: Advances in Digital Agriculture and Food Technology, Advances in Digital Economics, Advances in Digital Education, Advances in Public Health Care, Hospitals and Rehabilitation, Advances in Digital Social Media, Advances in Digital Technology and Applied Sciences, Advances in E-Information Systems, and Advances in Public Administration.

The papers accepted for presentation and discussion at the conference are published by Springer (this book) and will be submitted for indexing by ISI, SCOPUS, among others. We acknowledge all of those that contributed to the staging of ICADS 2021 (authors, committees, reviewers, organizers, and sponsors). We deeply appreciate their involvement and support that were crucial for the success of ICADS 2021 and hope they continue to be safe as we all work through these extraordinary times.
