the world living with or affected by HIV.*

Preface

A Clinical Guide to Pediatric HIV: Bridging the Gaps Between Research and Practice examines the impact of HIV on children, adolescents, and their families. Written by experts in the field, this book covers issues of concern to clinicians and researchers working in the area of pediatric HIV. Beginning with an overview of pediatric HIV epidemiology and the medical, developmental, and psychosocial concerns facing children and adolescents with HIV, this book offers a description of the unique challenges associated with HIV within families and schools. In addition, this book provides the latest research on topics of relevance to clinicians and researchers working in this area to include but not limited to disclosure, antiretroviral adherence, and ethical issues surrounding pediatric HIV. It concludes with a discussion of cross-cultural issues, HIV prevention, and HIV-related stigma. This book is an invaluable resource for researchers, academics, and clinicians working with children with HIV and their families as well as graduate students in the fields of psychology, social work, sociology, mental health, and public health. Although there are many resources focusing on HIV, this book's exclusive focus on pediatric HIV makes it an essential compendium for pediatric clinicians and researchers.

Index	317

Editor and Contributors

About the Editor

Tiffany Chenneville, Ph.D. is an Associate Professor and Graduate Program Director in the Psychology Department at the University of South Florida St. Petersburg. She has a joint appointment in the USF Department of Pediatrics where she has been involved for many years as a clinician and as a researcher in the pediatric/adolescent HIV program. Historically, Dr. Chenneville's research focused on issues of law, policy, and ethics with a particular emphasis on the decisional capacity of children with HIV to participate in treatment and research. She continues with this line of inquiry but, more recently, also has begun community-based participatory research in the area of HIV-related stigma among youth. Because HIV is a global disease, Dr. Chenneville is interested in cross-cultural research. She has worked in India and currently is working in Kenya. In addition to her research, Dr. Chenneville is collaborating with a filmmaker on a documentary about pediatric HIV.
